FINAL INSTALLATION: Lift canopy (B) to mounting bracket (C) again, aligning slotted holes in canopy (B) with loosened canopy mounting screws (G) in mounting bracket (C). Next come the ceiling blades. If you need to do some additional wiring to get the fan up, calling a professional might be best. Always remember to turn off your electricity at the main fuse/circuit box while you work. Twist canopy (B) clockwise to lock. Use the remote control transmitter to test the light and fan functions to confirm the learning process is complete. In warmer weather, setting the reverse switch in the LEFT position will result in downward airflow creating a wind chill effect. In cooler weather, setting the reverse switch in the RIGHT position will result in upward airflow that can help move stagnant, hot air off the ceiling area. CARE AND MAINTENANCE: At least twice each year, lower canopy (B) to check downrod (A) assembly, and then tighten all screws on fan. Simply reverse the steps from the installation process, and it should all go smoothly. Documents: Go to download!
